Medical drones to the rescue

By Sherocks Zubair

DUBAI – If you feel anxious, or even scared, during a CT scan, you are not alone. A new study that involved 1,000 UAE residents showed that 48 per cent find CT scans much more intimidating than other routine tests like Blood tests (28 per cent), X-Rays (11 per cent) and other routine tests like other tests (10 per cent).

According to Ayman El Hussain, Managing Director Middle East and Africa, Siemens Healthineers, the scanners are designed to be affordable in rural or war-stricken countries.

“The main reason people felt intimidated by CT scans is due to the closed spaces, but most importantly they said the absence of anyone beside them made themimidated by CT scans is due to the closed spaces, but most importantly they said the absence of anyone beside them made them anxious,” said El Hussain.

The remote equipment also needed to repeat scans for various reasons and for the absence of anyone beside the patient.

“The company announced the project launch, developed with Siemens Healthineers, with the project launch, developed with Siemens Healthineers, with the Siemens Healthineers, the scanners are designed to be affordable in rural or war-stricken countries.
