High levels of competence in design and processes, high productivity and low costs are the forte of Indian auto-makers.

* ASEAN member countries include Malaysia, Indonesia, the Philippines, Singapore, Thailand, Brunei Darussalam, Vietnam, Lao PDR, Myanmar and Cambodia
Indian automobile industry stands at 11 million vehicles at present

The Indian auto industry has the potential to emerge as one of the largest in the world. Presently, India is:

- The largest two-wheeler manufacturer in the world.
- The largest three-wheeler market in the world.
- The second-largest two-wheeler market in the world.
- The fourth-largest commercial vehicle market in the world.

* Compound Annual Growth Rate (CAGR)
All large global players are present in India

- GM
- Toyota
- Ford
- Hyundai
- Maruti Suzuki
- Honda
- Skoda
- Volvo
- Mercedes Benz
- BMW
- Volkswagen
- Suzuki Motorcycle

- Tata Motors
- Mahindra & Mahindra
- Bajaj Auto
- TVS Motors
- Hero Honda
- Force Motors
- Ashok Leyland
- Eicher
- Swaraj Mazda

- Delphi
- Visteon
- Bosch
- Denso
- Denso
- Valeo
- Thyssen Krupp

- Bharat Forge
- Sundram Fasteners
- Rane Group
- Shriram Pistons
- RICO Auto
- Sono Koyo Steering
- Exide
The OEM as well as the component industry is highly competitive

- The Indian auto industry is highly competitive with a number of global and Indian auto-companies present.

- The supplier industry is equally competitive with a mix of global and Indian players.

- Two-thirds of auto component production is consumed directly by OEMs.

- The major advantage of the Indian automotive industry is an educated and skilled, English-speaking workforce.
Indian auto industry has evolved around three major clusters

... (1/5)

- Major automotive clusters: Mumbai-Pune-Nashik-Aurangabad (west); Chennai-Bangalore-Hosur (south); and Delhi-Gurgaon-Faridabad (north).

- Export-oriented companies have formed base in the west/south regions, due to proximity to ports.

- Uttarakhand is fast emerging as an auto hub with leading companies deciding to set up units in the state to make use of the benefits of the state’s tax-holiday scheme.

- Tata Motors, along with Bajaj Auto and Mahindra & Mahindra, are together investing about US$ 640 million in Uttarakhand.

- With the upcoming plant of Tata Nano in Gujarat, Sanand is also likely to develop as another node in the western cluster.
Indian auto industry has evolved around three major clusters
… (2/5)

Major cluster: North/Central

- Hero Honda
- Honda SIEL
- Honda Motorcycle & Scooter India
- Maruti Suzuki
- Tata Motors
- Bajaj Auto

- Delphi Auto
- JBM
- Sona Koyo
- Asahi India
- Denso India
- Lumax
- Johnson Matthey
Indian auto industry has evolved around three major clusters

... (3/5)

Major cluster: West

- Daimler
- GM
- Skoda
- Bajaj Auto
- Mahindra & Mahindra
- Tata Motors
- Volkswagen

- Bharat Forge
- DGP Hinoday

- Tata Motors
- Hindustan Motors
- Simpson & Co
- International Auto Forgings
- Ramkrishna Forgings
- JMT
- Exide
Indian auto component industry has grown at a CAGR of over 22% in the last five years

- The Indian auto component industry reached a size of US$ 19 billion in 2008–09, growing at a CAGR of around 23 per cent over the last five years.

- Though the industry witnessed slower growth in 2008–09 owing to the global slowdown, Indian auto component manufactures are equipped to address the challenges of a downturn.

- Positive sales trends in the first quarter of the current fiscal year demonstrate the strong fundamentals underlying the industry.

Source: Automotive Component Manufacturers Association (ACMA), IMaCS analysis
Exports of auto components stand at around US$ 3.8 billion

- Exports by the Indian auto component industry touched US$ 3.82 billion in 2008–09.

- The growth trend for the year reflected the impact of the global slowdown; however, Indian auto component manufacturers have adopted risk mitigation measures through diversification strategies in terms of tapping new regions and strengthening their position in the Indian after-market.

- Indian auto component manufacturers expect a surge in exports with the coming into effect of the ASEAN free trade agreement (FTA) as India is in a strong position to gain from it.
Europe, followed by the US, are the top export markets for India

- Europe and the US together account for nearly 58 per cent of total exports from India.

- Asia is gradually becoming a key market for component exports.

- Auto component manufacturers are gradually moving up the value chain with the share of supply to OEMs in total exports increasing and supply to the aftermarket decreasing.
Indian auto component industry is highly fragmented

- About 600 organised players account for 77 per cent of the value added in the sector.

- Unorganised players are mainly replacement market players or tier-3/tier-4 component manufacturers.

- The Automotive Component Manufacturers Association of India (ACMA) represents the auto component industry in India and has around 595 registered members.
Break up of auto component market

Break up by market type for 2007 – 08 (E)

- OEM components: 44.00%
- After-market: 18.20%
- Exports: 37.80%

Break up of components industry by type of components

- Engine parts: 31%
- Drive transmission and steering: 12%
- Body/chassis: 12%
- Suspension and braking: 12%
- Equipment: 9%
- Electrical: 7%

Source: IMaCS analysis
E = Estimated

- OEM demand accounts for half of the auto component market in India.

- OEM demand accounts for half of the auto component market in India.
Two-wheeler, three-wheeler and car segments account for a major portion of the component market in India

- Two- and three-wheelers, along with passenger cars, account for two-thirds of the components manufactured.

- However, commercial vehicle (CV) components have shown the fastest growth rate over the last five years. The growth rate of components for various vehicle categories are as follows:
  - Two-wheelers, three-wheelers and cars: Around 15 per cent
  - CVs: Over 25 per cent
Industry-wide cost structure

• During the quarter ended June 2009, all costs as a percentage of sales have seen a decline except for power, oil and fuel costs.

• Raw material costs has contributed the maximum to improvement in margins as these costs have come down from 63.3 per cent in March 2008 to 57 per cent in June 2009.

</table>

- Quarterly results for April to June 2009 suggest that the industry has bounced back very quickly in terms of both sales and profit after tax (PAT) growth.
- The suspension and braking segment has out-performed the industry’s CAGR in terms of profit before depreciation, interest and taxes (PBDIT) and profit before tax (PBT).
- The average PBT margin for the industry over the last six quarters stands at around 5 per cent.
Growing exports have fuelled quality improvement

• The quality awareness of Indian companies has increased over the last decade driven by the need of the export market and the increasing demand for quality from Indian OEMs.

• 11 Indian auto component manufacturers have got the prestigious Deming Prize.

• Vehicle dependability across the auto industry in India averages 290 problems per 100 vehicles (PP100), which is an improvement over the 2008 figure of 331 PP100.

• Although improvement is evident across most problem categories, the improvement is primarily driven by fewer reported problems with the driving experience and engine categories.
Indian auto component companies are going global, mainly through acquisitions and JVs

- The year 2009 has not seen much activity in terms of acquisitions by Indian auto component companies as compared to 2008 and 2007.

- Traditionally, the trend has been to cater to high-margin markets in Europe and the US through acquisitions.

- A growing number of deals are, however, now foreseen in emerging markets to counter the saturation/recession in developed markets.

Most auto component manufacturers are capable of carrying out product development activities at low costs

- Close to 0.4 million engineering graduates are available every year
- India accounts for 26 per cent of the world’s engineering services outsourcing (ESO) and business process outsourcing (BPO) talent

High level of existing capabilities

- Analysis and simulation
- Engineering animations
- Modelling and drafting
- Tooling design, etc.

Large pool of English-speaking engineers

Growing threat
- Increasing competition from China and South Asian countries in ESO market

Low-cost, high-quality designs

- Entry-level engineer costs as less as US$ 8,000 per year
- 89-92 per cent “first-time right” designs experienced by a few companies, much above world average

Design experience with high degree of indigenisation

- High levels of indigenisation by foreign OEMs and increasing skill sets
- World-renowned IT skills with excellent automotive domain knowledge

Low cost of employment and “first-time right” designs
National Automotive Testing and R&D Infrastructure Project (NATRIP) — an initiative to strengthen R&D infrastructure — is approaching completion

- NATRIP, a Government of India (GoI) initiative, has envisaged an investment of Rs 1,718 crore (about US$ 380 million) in setting up the following facilities. NATRIP is expected to strengthen the automotive R&D infrastructure in India.

**Rae Bareilly centre**

- Complete homologation services to agri-tractors, off-road vehicles, gensets as per Indian or global standards and a driver training centre.

- Center of excellence for accident data analysis.

- The commissioning schedule for phase-I is July 2010 and August 2010 for phase-II.

- The acquisition of land for setting up the centre is in progress and is under consideration of the Uttar Pradesh government.
NATRIP — northern and eastern region

International Centre for Automotive Technology (iCAT), Manesar

• Complete homologation services to all vehicle categories as per Indian or global standards.

• Center of excellence for component development, noise vibration and harshness (NVH) testing.

• It is scheduled to be commissioned in March 2010.

• Construction of buildings for powertrain lab and fatigue and certification lab; procurement of equipment for two more labs; and acquisition of an additional 42 acres of land is in progress.

Silchar centre

• Hill area driver training centre and inspection & maintenance facilities.

• Center of excellence for driver training.

• Commissioning schedule: 2010 (on schedule); civil works at one site completed; tenders for equipment on track.
NATRIP — western region

Ahmednagar — Vehicles research & development establishment (VRDE) upgradation

- Research, design, development and testing of vehicles.

- Center of excellence for photometry, electromagnetic compatibility (EMC), test tracks.

- Commissioning schedule: Completed.

Indore – National Automotive Test Tracks (NATRAX)

- Complete testing facilities to all vehicle categories as per Indian or global standards.

- Center of excellence for vehicle dynamics, tyre development.

- Commissioning schedule: December 2010.

- In progress: 4,000 acres of land already acquired; construction of powertrain lab, test tracks and building in advanced stages; shifting of utilities in progress.
NATRIP — southern region

Pune — ARAI upgradation

- Complete homologation services to all vehicle categories as per Indian or global standards.

- Center of excellence for power train development, materials, fatigue.

- Commissioning schedule: Rescheduled to March 2010.

- In process: Land acquisition nearing completion; civil package tender in final stages; equipment tender finalised.

Chennai centre

- Complete homologation services to all vehicle categories as per Indian or global standards.

- Center of excellence for infotronics, EMC, passive safety.

- Commissioning schedule: Rescheduled for December 2009.

- In progress: Award of most of the work completed by April 2009.
The focus of this presentation is to discuss…

- Profile of Indian auto component industry
- Growth potential of Indian auto component industry
- India as a manufacturing hub
Indian auto industry is expected to grow to US$ 130 billion to US$ 150 billion by 2016

- The size of the Indian automotive industry is expected to grow at 13 per cent per annum to reach around US$ 130 billion to US$ 150 billion by 2016.
- In volume terms, the market is expected to grow to 31.96 million vehicles by 2016.

Potential vehicle sales in 2016

- Total: 31.96 million units
- 3-wheelers: 0.87 million units
- 2-wheelers: 27.8 million units
- CVs: 0.64 million units
- Cars: 2.65 million units

Sources: Automotive Mission Plan (AMP), SIAM, ACMA, IMaCS analysis
Indian auto component industry is expected to grow to US$ 33 billion to US$ 40 billion by 2016

- The Indian auto component industry is well positioned to capitalise on the growth in outsourcing to low-cost countries.

- Exports would lead the growth in the component industry, which is expected to be worth US$ 33 billion to US$ 40 billion by 2016, from the current size of more than US$ 18 billion (2008–09).

Sources: AMP, SIAM, ACMA, IMaCS analysis
The focus of this presentation is to discuss…

- Profile of Indian auto component industry
- Growth potential of Indian auto component industry
- India as a manufacturing hub
Several factors make India a favourite investment destination

**Proximity to markets**
- Proximity to other Asian economies
- Proximity to the emerging markets such as Africa
- Shipments to Europe cheaper than those from Brazil and Thailand

**Proven product developmental capabilities**
- More than 125 Fortune 500 (including large auto companies) have R&D centres in India
- Companies can leverage India’s acknowledged leadership in the IT industry

**Stable economic policies**
- Continuity in economic reforms and policies related to investments

**High quality standards**
- 11 Indian component manufacturers have won the Deming Prize for quality
- Most leading component manufacturers are QS and ISO certified

**Competitive manufacturing costs**
- Skilled labour costs amongst the lowest in India.

**Large and growing domestic demand**
- Demand growth at 14 per cent CAGR makes India one of the fastest-growing markets

**Availability of manpower**
- 0.4 million engineering graduates every year
- Seven million enter workforce every year

**Export potential**
- Total value of exports by 2015 expected to reach US$ 8 billion to US$ 10 billion for vehicles and US$ 20 billion to US$ 25 billion for components
Indian auto component industry offers a balance between quality and costs

- There are nearly 0.4 million engineering graduates available every year in India at globally competitive costs.
- There are close to 500 ISO 9000-certified suppliers.
Many global auto companies have made India a manufacturing base as a robust supply base exists in India.

Competitiveness of Indian auto component industry

• In order to emerge as a manufacturing hub, India faces competition from other low-cost countries such as:
  
  - China
  - Thailand
  - Brazil

• IMaCS has compared the cost competitiveness of manufacturing six automotive component groups (engine, transmission and steering, suspension and braking, electricals, equipment and others) in India with respect to these countries in terms of factors such as:
  
  - Taxes and duties
  - Cost of manufacturing (for example, power and fuel costs, labour costs)
  - Economies of scale

• Competitiveness of manufacturing in India is improving with the reduction of tax levels, tax reforms and with improving business infrastructure.
Tax structure in India vis-à-vis other countries

- The burden of direct and indirect taxes is higher in India than in other countries.

Source: GoI, Apec.tariff
- Government of India announced an across-the-board excise duty reduction of 4 per cent across automobiles on December 7, 2008
- In case of bus chassis, excise duty is at 8.18 per cent. *Refers to local taxes such as Withholding Tax (WHT)

^Import duty on heavy plates has been reduced
Labour and labour productivity in India vis-à-vis other countries

- India compares favourably with other low-cost countries in productivity-adjusted labour cost.

- Indian labour productivity in the manufacturing sector is on the increase with the application of production management techniques; many companies have doubled their productivity in the last five years.

- Government of India has earmarked nearly Rs 1,000 crore for human resource skill development initiatives across industry sectors.

Swift progress on the National Skill Development Program (NSDP)

- The aim of the mission is “to provide within a 5-8 year timeframe, a pool of skilled workforce, sufficient to meet domestic requirements, with surpluses to cater to the skill deficits in other ageing economies”.

- The National Skill Development Corporation (NSDC) has been established with a commitment of Rs 1,000 crore from the Centre. Another Rs 15,000 crore is envisaged to be generated from state governments, public sector entities, the private sector, and bilateral and multilateral sources.

- The automobile and auto components sector is one of the top-10, high-growth manufacturing sectors that is in focus for sector-specific skill development; the sector enjoys extensive participation from the industry.

- The mission is expected to enhance skill availability and productivity across the industry.
Power costs and interest rates in India vis-à-vis other countries

- Power costs in India are the highest amongst competing countries.

- However, power cost accounts for only around 3 per cent of the overall cost structure and is, hence, not a significant disadvantage.

- Power costs in India vary by state and are as low as US$ 0.1 in states such as Maharashtra.

- With privatisation and competition in the Indian power sector, the cost of power is expected to be rationalised further.

- Interest rates in India are high as compared to competing countries, but are expected to soften in the future.

- The recent downturn across the global economy has forced central banks of major countries to slash lending rates.

Manufacturing in China vis-à-vis India

- Indian manufacturers suffer from a cost disadvantage vis-à-vis Chinese manufacturers mainly because of higher power and fuel costs and, to some extent, due to the cascading impact of taxes.

Performance of Brazil, Russia, India and China (BRIC) countries in auto component industry

China

• A large market and has a fast-developing auto component industry.

• China’s indigenous industry is fairly nascent and may be considered to be in the early stages of development.

India

• India has an indigenous industry that has been growing.

• Indian companies are also investing in international acquisitions, development of new brands, assets and technologies.
Performance of Brazil, Russia, India and China (BRIC) countries in auto component industry

Russia

- The relatively low quality of auto components manufactured has inhibited the growth of local vehicles’ production.

- But, at the same time, there exists a significant opportunity for new companies to set up large-scale production of auto components to be supplied to Western-brand cars.

Brazil

- Brazil lacks major indigenous players in auto components.

- The country has attracted several investors to the sector and is today a major net exporter of auto components.
Conclusions … (1/2)

• India has a cost advantage when compared to Brazil. India, however, suffers from a cost disadvantage vis-à-vis China and Thailand, primarily due to the high level of taxes and their cascading impact.

• India, in the near future, is expected to go ahead with the abolition of the inter-state central sales tax (CST), which will reduce the cascading impact of taxes to some extent.

• Implementation of goods and services tax (GST), along the lines of VAT, and abolition of all other taxes is in progress and is targeted for April 2010. It will reduce the taxation loading on the automotive sector considerably. This step is expected to strengthen India’s future position as a leading automobile manufacturing hub.

• Various steps being taken by the Indian government to improve infrastructure in order to reduce the disadvantage that India suffers because of poor infrastructure that causes project delays, delays in deliveries and so on. This would increase the demand for road transportation in the country.
Conclusions … (2/2)

• Apart from road infrastructure, R&D infrastructure under the US$ 380 million Central government project, NATRIP, which is expected to be completed by the end of year 2010, is expected to provide India a distinct advantage over other low-cost countries in the automotive industry.

• With the widespread implementation of the NSDP and the effecting of the ASEAN free trade agreement, skill development and productivity enhancement will add to the industry’s competitiveness in the global market.

• Further, with the rising manpower costs in China, the competitiveness differential between India and China is fast reducing, strengthening India’s potential for becoming the manufacturing hub for the global automotive industry.
